Maintenance Checklist

Checklists available on our website:

◊ Saving Water Checklist

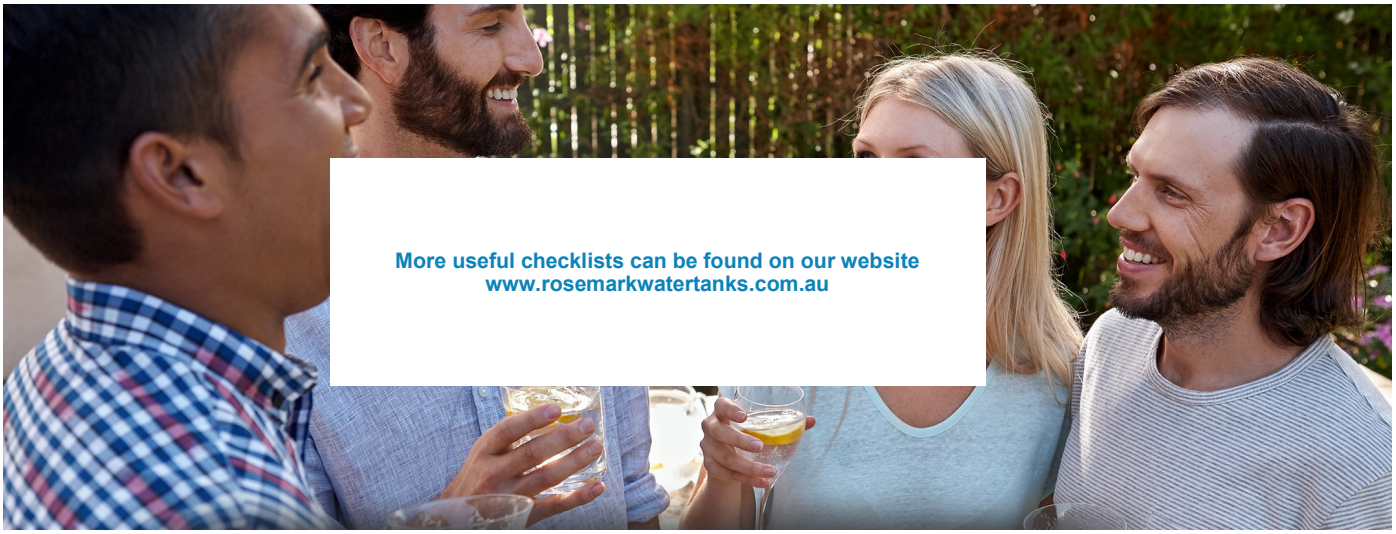
◊ Installation Checklist

◊ Maintenance Checklist

A little maintenance is important

The best way to ensure you collect clean rainwater is to minimise contamination by following the Clean Water Checklist. The best way to make sure it remains clean is to follow the maintenance checklist below.

Have you?

1. Checked tree growth every 6 months and pruned as required?
2. Checked inlet, overflow, outlet screens?
3. Inspected gutters every 6 months and cleared as required?
4. Checked first flush diverter every 6 months and cleaned out as required?
5. Cleaned the tank and removed any sediment or disinfected with chlorine if needed? This only needs to be done if you notice a rotten egg smell.
6. Checked pump installation is adequate, water tight and free from debris and serviced/ replaced every 10 years or as recommended by the pump manufacturer?


Note: odourless microbial films will form in any container that constantly holds water but they are not harmful and are not a cause for concern.
